targeted at professionals, contractors, and other users with at least intermediate technical and/or drafting skills. AutoCAD is available in two versions, a personal edition and a commercial edition. The latter is called AutoCAD LT. For many years, the AutoCAD software was used as the main product in the AutoCAD product line. As of 2018, AutoCAD LT was introduced as a free and open source software (FOSS) solution. In the Autodesk 2017 release of AutoCAD, AutoCAD LT was replaced by AutoCAD Architecture, AutoCAD Structural, and AutoCAD Electrical. The product line

Crack. This invention relates to a curtain airbag system that includes a panel of inflated material and a base member that is sized to extend from the panel and hold the panel in a deflated condition. Various types of airbags are known in the art. As part of an occupant protection system, an airbag is located in the vehicle interior. For example, a side airbag is located in the vehicle door and deploys between the occupant and the door in the event of a side impact on the vehicle. Vehicles that are particularly susceptible to damage in the event of a side impact include truck-type vehicles, such as step vans,

---

recreational vehicles, and heavy equipment. These vehicles typically include large windows with a wide, horizontal opening in the door. The airbag should not interfere with ingress or egress of the occupant from the vehicle and should protect the occupant from the impact of the vehicle door. In particular, when the airbag contacts the door, the airbag should protect the occupant from injury from the door. The airbag should be able to absorb the impact of the door and restrain the occupant from being thrown from the vehicle and injury caused by the door.

The new Export enhancements in the Export panel let you choose which layers to export and which to keep private. Export without layers means no changes are imported into your design. Export with layers enables you to make changes to your design while keeping the original drawing untouched. When creating a new drawing in Windows 10 or in AutoCAD 2020 or later, you can choose to import feedback from a printed paper or PDF and automatically add it to the new drawing. (video: 1:15 min.) Use the

Export panel to limit your exported drawing to just layers, objects, and text. (video: 1:13 min.)

New task panels in Architectural 2D: The new task panels in Architectural 2D let you add dimensional constraints and reference data to existing DWG files. (video: 1:30 min.)

Add 3D constraints in your architectural drawing. (video: 1:30 min.)

New customizing options for AutoCAD Architecture 2D: In AutoCAD Architecture 2D, now you can use the master brand colors of your master plan to customize the appearance of all the objects in your 2D drawings, including street walls, site plans,

---

architectural drawings, and more. You can apply your master plan brand colors to the entire drawing, or to specific objects or areas. You can also use a combination of master plan brand colors to create a custom color scheme for your city or site plan, or to make your images match the branding and look of your company. Updates for tools in AutoCAD Architecture 2D: The Arctoolbox helps you import CAD files from other software programs. (video: 1:42 min.) Use the new Files panel to import a CAD file and load it as an AutoCAD object. (video: 1:42 min.) Enable the new File tab

in the Internet Browser, so you can open a file from the Web. (video: 1:42 min.)
